WHAT IS ALGORAS© ERP?

ALGORAS© ERP is an Enterprise Resource Planning Cloud Platform that bridges the gap between business & software and help you run your business more effectively & efficiently.

IS IT GOOD FOR MY COMPANY?

Whether you are a small/medium/large organization and looking to re-organize, increase profitability, increase efficiency, increase productivity of your business then you need it.

ABOUT

Overview

ALGORAS©, Enterprise Resources Planning (ERP), is a fully integrated system that allows organizations to run, standardize, regulate, and integrate the business processes across all the departments and divisions. ALGORAS© automates many functions related to Finance, Human Resources & Payroll, Project Management, Procurement, Sales and Marketing, and many more.

The ALGORAS© Team

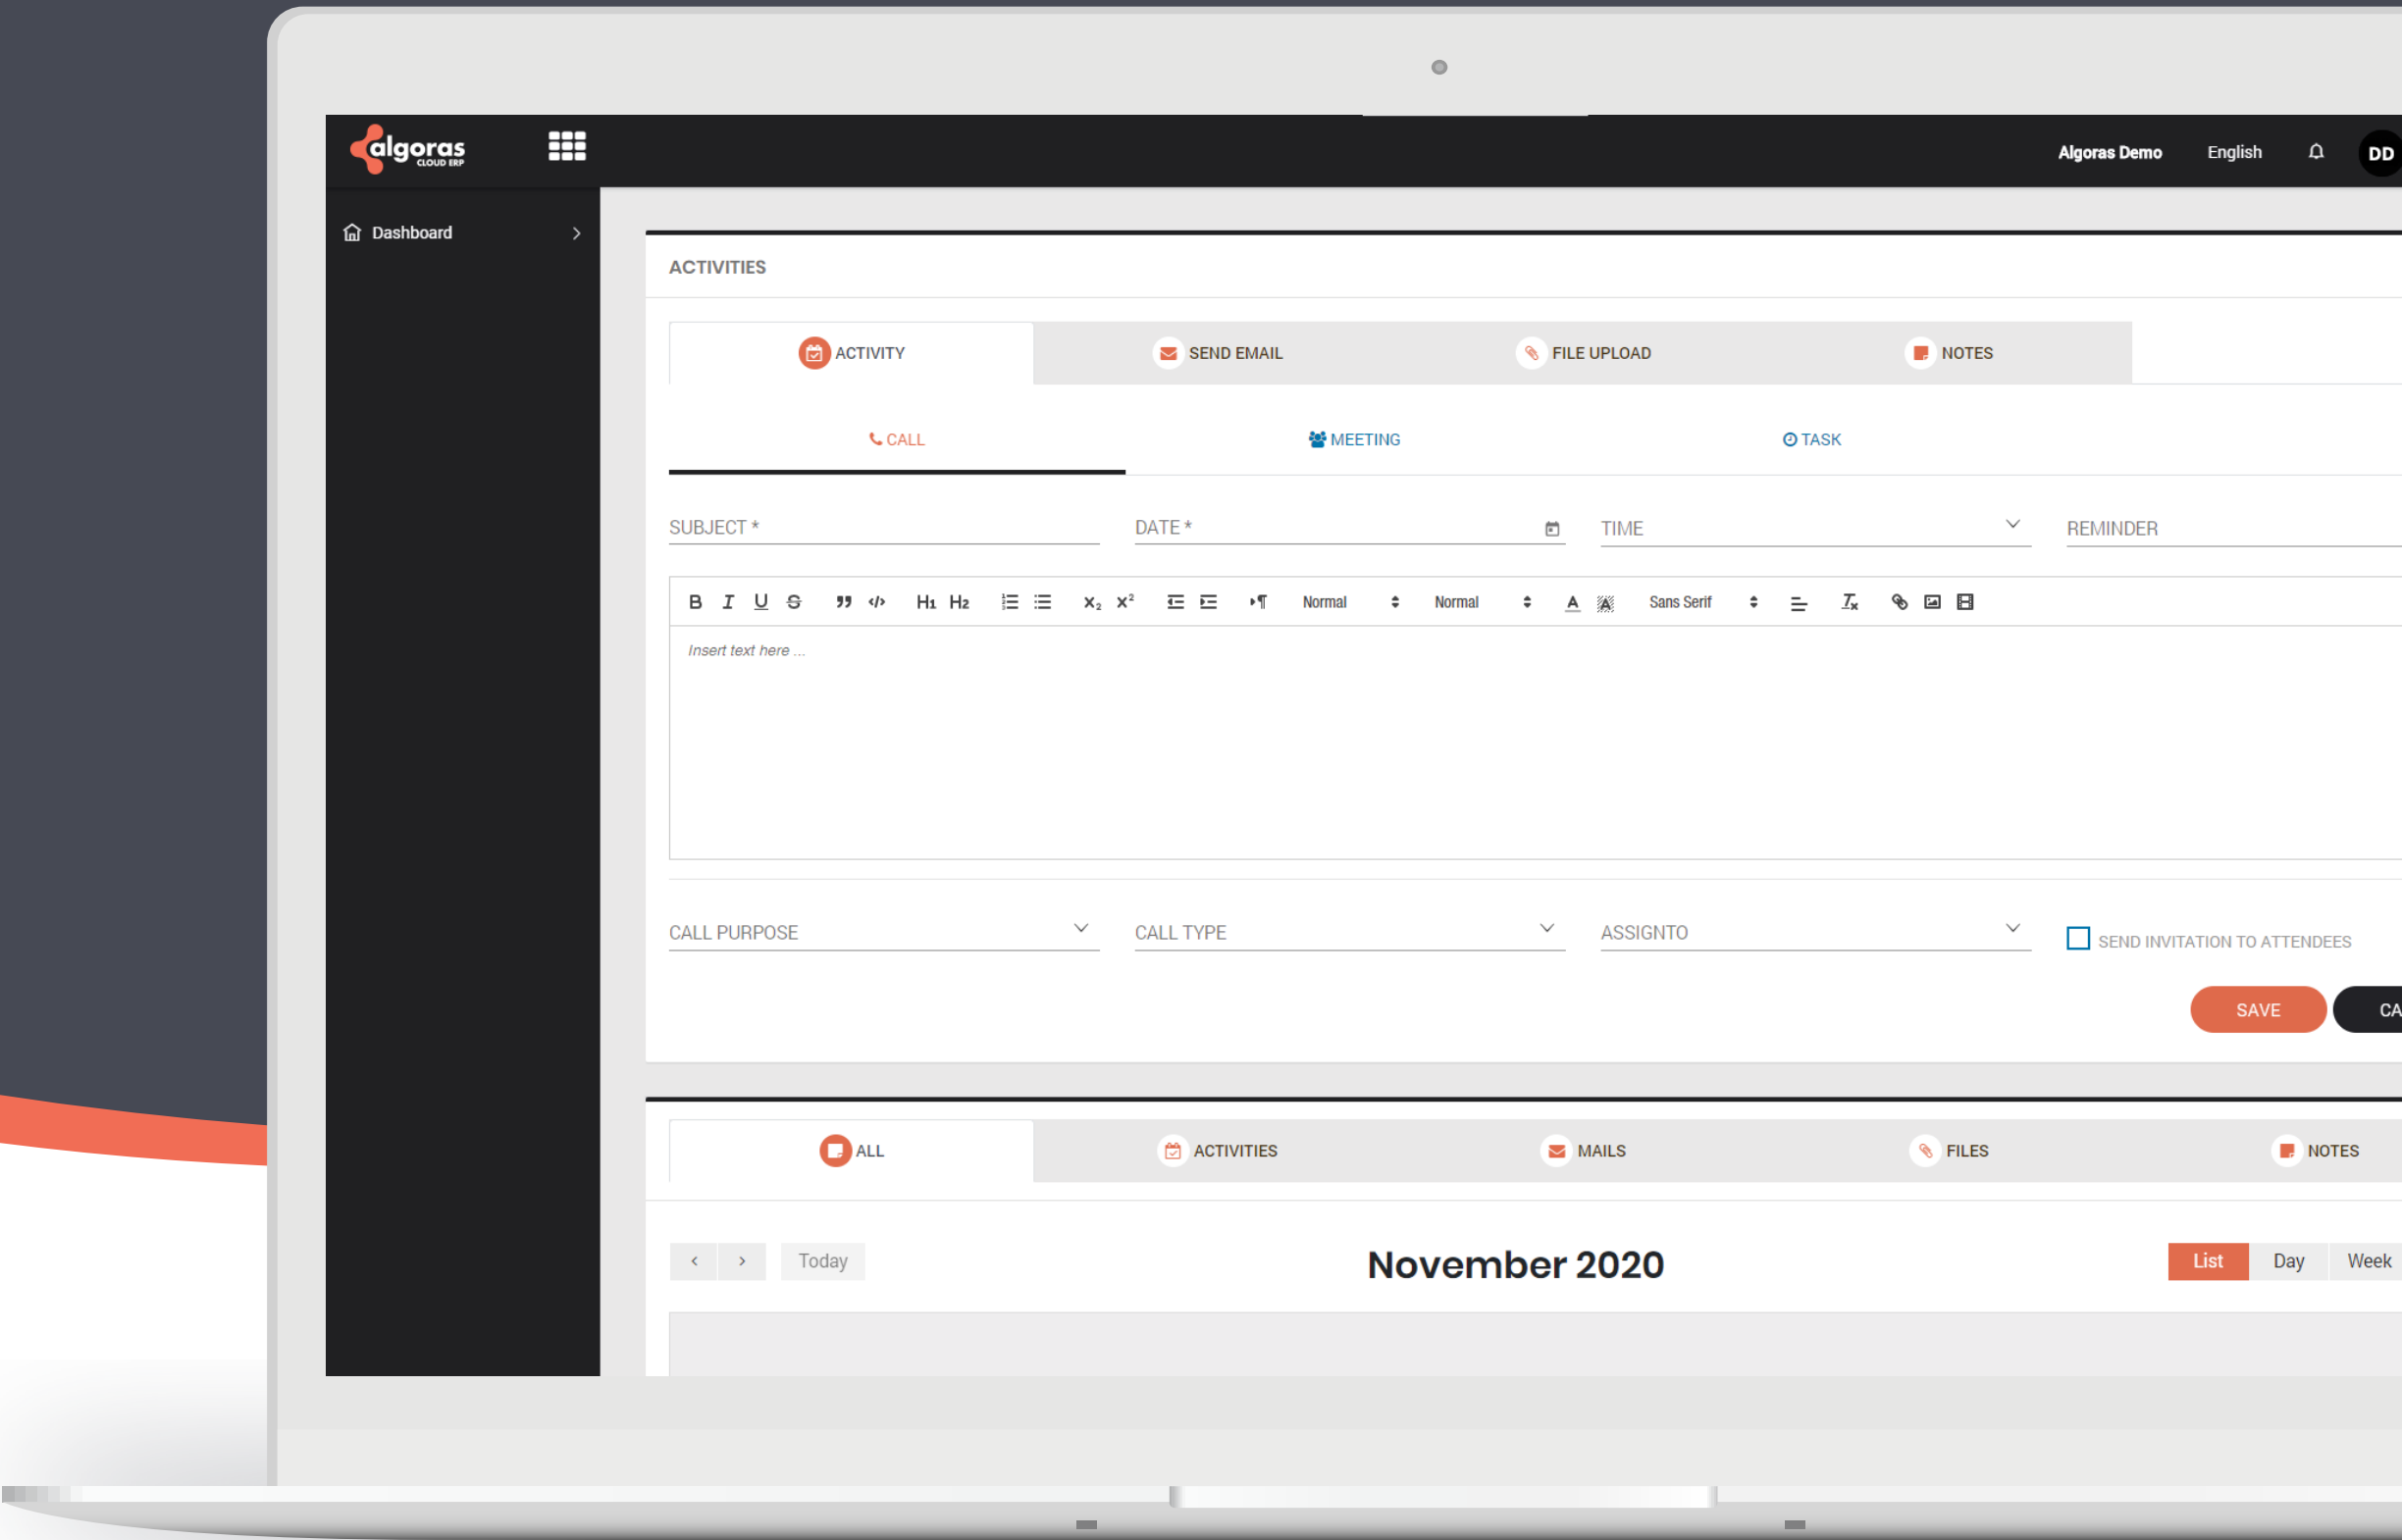

The ALGORAS© software development team is consisting of highly trained and efficient staff members who have worked on international projects. These experts are from the biggest and most prestigious technology institutes. The motto of the team is to create a service for the clients that is unmatched by any other in the business. The teamwork is the focal point because from years of working experience the members of the team understand its importance. The members of the digital team are eager to start new projects and provide assistance on every step of the way. The negotiation and discussion table of the ALGORAS© team is always crowded with ideas and innovations.

ALGORAS© Corporation

As a technology and internet support system company the ALGORAS© Corporation recognizes the importance of innovation and flexibility. The team members go to the drawing board for every proposal. The first and foremost focus of the ALGORAS© team is to create an excellent project outline within ideal timeline. This project outline is not one sided and the customer’s opinions, ideas, and requirements are always the dominating factor. There is always room for contingencies and flexibility within the budget and timeline constraints. The approach of ALGORAS© is not about dictating the project or being suggestive. The working members of the team have full grasp over their work, and they do not rest until the client gets a product that they have envisioned.

The ALGORAS© Approach

The ALGORAS© foundation has been providing services since many years. It is already working recognition as the top brand due to its service quality, innovation, and great work ethics protocols. Within no time the ALGORAS© brand have become symbols of reliable software design and a goodwill that must not be ignored. The ALGORAS© system knows no limits and no bounds. It only works with the best to make sure that its clients get the best responses. At ALGORAS© the customers always come first and foremost. The goal of every ALGORAS© project is not to make money but to build a brand recognition that is unmatched on an international level. For every corporate department and trouble the ALGORAS© software has a solution to offer. There are no factors that the ALGORAS© software does not cover and any corporation cannot help but depend on the ALGORAS© for upgrades and system improvement methods.

WHY CHOOSE ALGORAS©

Leverage the powerful tools & decision making KPIs that keeps you ahead of the competition. It helps your company by minimizing losses caused by lack of information and poor internal collaboration & communication.

Dimensional Accounting & Multi-Dimensional Reporting

The problem that many traditional ERP's have is that they follow a rigid structure when setting up the chart of accounts.

A multi-dimensional chart of accounts (COA) is an account numbering system that has multiple segments defined within an account structure and enables tracking and reporting at a greater level of detail. Chart of account dimensions are also often referred to as chart of account segments.

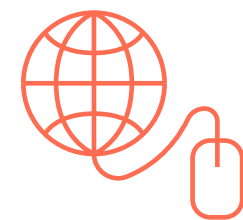

Dimensional accounting is basically tagging each transaction and operational data with appropriate dimensions like Branch, Business Unit, etc. This allows you to maintain each segment separately, thereby limiting the overall maintenance on GL accounts and your chart of accounts remains pure.

In ALGORAS© you can create configurable accounting dimensions and use them in transactions and reports, Which lead to saves time in every step of the accounting process, including set-up, data entry, and reporting.

Accessibility and flexibility

Mobility is fundamental to all cloud ERP applications. Our cloud ERP application is flexible and can be accessed via mobile phones that have an internet connection, anytime and anywhere. Users who used to work outside the company premises can now execute their tasks and manage business operations without sitting at their desks all day.

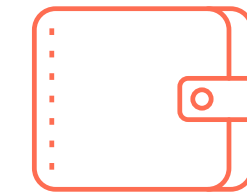

You Can Take It Anywhere

Cloud ERP allows your employees to find information whenever and wherever they need it – all they need is a device with internet connection.

For example, your Sales department could access inventory levels, order statuses, and more all while on the go. They won't have to worry about their information being up to date both since all data is updated and uploaded to the cloud in real-time.

There's also no need to worry about lost or stolen data if it needs to be accessed outside the office since no information needs to be stored locally on an individual's device. Every user also has a password protected account, so when that laptop bag gets lost at the airport, your whole business doesn't have to be lost with it.

With a cloud ERP, collaboration among teams, even geographically disparate ones becomes much easier. All anyone needs to access key business information is an Internet enabled device running any common browser. Your staff does not lose time commuting into the office. And you don't have to wonder whether the information you're looking at is up-to-date.

Lower Cost of Ownership

On-premise ERP systems generally demand an upfront investment, to purchase software, hardware, servers and additional facilities necessary to run these systems. along with continual maintenance and on-going hardware-associated costs. They also require an experienced IT staff to maintain the server hardware and infrastructure and integrate, operate, maintain and customize the ERP System. On the contrary, initial investments for hosted ERP software are generally lower, since implementation lacks the need for hardware installation or maintenance. You also don't need IT resources to manage and maintain the server hardware and operating environment

It Improves Productivity

With an easy implementation comes increased productivity. With cloud ERP systems, you have much less downtime. This means you can carry on business as usual, instead of putting your processes on hold while your system gets up and running.

Cloud ERP also allows for a greater degree of automation. Since the information is stored and accessible in the cloud, systems like online order management can always have the most current figures when it comes to things like inventory. This alleviates the need to copy and paste data from one source to another, as well as facilitating a more exceptional customer experience.

Accurate forecasting

The data storage and analysis features offered by ALGORAS© helps your company elaborate accurate and scientific forecasting based on real numbers.

WHY CHOOSE ALGORAS©

Improve Process Efficiency.

ALGORAS© helps you improve your process efficiency by automating them therefore making them more efficient and accurate.

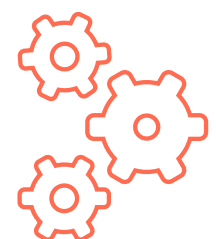

Customer service

Satisfying our customers is our number one goal. Our Customer Service department makes sure that all your questions are being answered and all your problems solved.

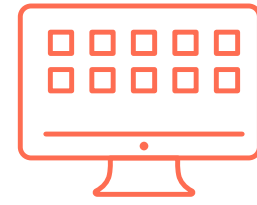

Real-Time Business Information

ALGORAS© Cloud ERP allows you to gain real-time access to your data on the go. So that users can take quick and informed decisions which ultimately contribute to the improvement in performance of the business.
